

Pole Guard

"Using our energy...to
protect YOURS"

If you are one of the thousands of power companies plagued by possum power outages, the Pole Guard is the answer.

The Pole Guard is both effective...

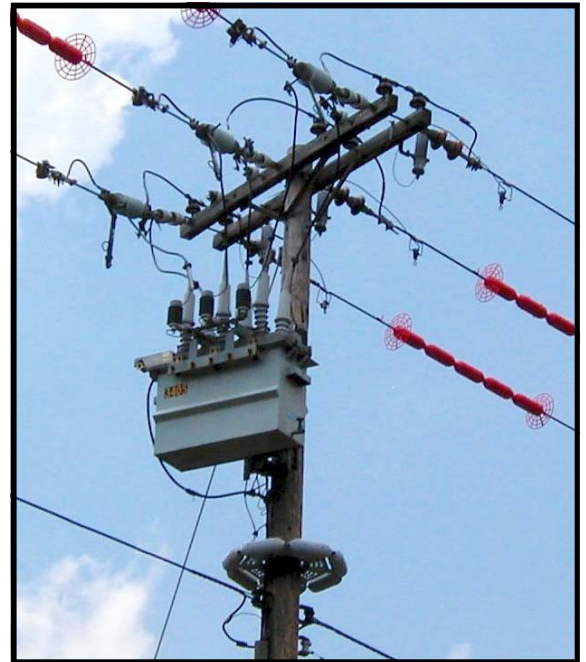

- The Pole Guard utilizes a "roller" application that restricts possums from gaining a perch above the product.
- The sound circular geometry prevents any "dead area" where the rollers meet.
- In order to keep possums from going in-between the plate and the pole, the base of the plate allows for less than 1" of clearance.

(Above: Pole Guard Assembly)

...and versatile.

- In our design we made sure not to restrict a line-man's ability to safely maintain a pole. The rollers can be removed requiring only a 4½" surface to clear when climbing the pole.
- The Pole Guard comes with conduit cutouts that can service up to a 2" pipe and a 10"-12" pole diameter.

What we know...

Possums and Birds are a leading cause of power outages in Australia. This poses a serious threat not only to cost control, but your ability to provide quality power services in a very competitive market. That is why our mission at Adapt Australia P/L is to offer an innovative and permanent solution to the unanswered problem of animal power outages.

...is why you can realize the true potential of "Power Quality." Please call or visit our website, www.adaptnz.com, for more information.
